Human ProIGF-II E (78-88) antiserum (Rabbit)

Description

Human ProIGF-II E (78-88) antiserum was prepared by immunising rabbits with an 11 amino acid peptide derived from the E domain of human IGF-II E linked to diphtheria toxoid. The sequence corresponds to IGF-II E₇₇₋₈₈ and as a consequence, the antiserum recognises full length IGF-II E and both IGF-II E variants (IGF-II E₁₋₈₈ and IGF-II E₁₋₁₀₄) derived from processing of the human *igf-2* gene and following proteolytic cleavage. It does not recognise mature IGF-II or IGF-I. Sequence analysis suggests it is likely to recognise IGF-II E proteins in non-human primates, dog, guinea-pig, pig and a number of other species.

Immunogen:

Derived from UniProtKB/Swiss-Prot sequence ID P03144 isoform 1. The peptide sequence is amino-acids 102-112, derived from IGF-II E, conjugated to diphtheria toxoid.

Source:

Rabbit antiserum

Specificity:

Determined by Western blotting. Recognises full length human IGF-II E (IGF-II E₁₋₁₅₆) and proteolytically cleaved variants (IGF-II E₁₋₈₇) and (IGF-II E₁₋₁₀₄).

No cross-reactivity against mature IGF-II or IGF-I.

Appearance:

Lyophilized powder

Storage/Stability:

At least 2 years at 2 - 4°C (lyophilized).

After reconstitution store at -20°C or -80°C

Avoid freeze-thaw cycles

Reconstitution:

Dissolve the vial contents in 500 µl sterile water and then dilute in a buffer suitable for the application.

Application and Titre:

Each application and titre should be determined in house. As a guideline the antiserum can be used at a dilution of 1:8000 for Western immunoblotting and 1:4000 for enzyme immunoassay
